Notes:			
A Unless otherwise noted, all sources provide data for the entire state.			
B. Complete buildout of the coastal zone generally anticipated by the comprehensive plan. Data in this table entry identifies lands that are expected to remain undeveloped. Future development assumed to include all other lands that are neither currently developed nor identified as conservation.			
C. Planners provided hard copy map, generally based on comprehensive plan.			
D. "Same" means "same as the data sources listed immediately to the left."			
E. In addition to the data layer, the boundaries of RCAs established by Critical Areas Act generally were embodied in the county comprehensive plans, many of which discourage development inland from the landward boundary of the RCA.
